SUMMARY

Integrated M.Tech Computer Science student graduating in 2026 with hands-on experience in backend development. Built scalable backend systems with secure authentication, inventory management workflows, and database integration during internship experience at Virtusa, with additional experience in machine learning and deep learning projects. Currently looking for an opportunity where I can grow, contribute to impactful work and build reliable solutions.

EXPERIENCE

Backend Developer Intern – Virtusa Consulting Services Pvt Ltd, India. — [Link](#)

Aug 2025 – Till Date

Tech Stack: Java, Spring Boot, MySQL, Hibernate, REST APIs

- Contributed as a Backend Developer in a 10-member-full-stack team to build a Grocery Inventory Management System with 18+ REST API endpoints across auth, inventory, stock, invoice, and reporting modules using Spring Boot and MySQL
- Replaced a zero-auth system with stateless JWT + HttpOnly cookie authentication, enforcing role-based access control across 3 roles (Maker, Checker, Manager) using Spring Security.
- Refactored 8–10 modules using Object-Oriented Programming (OOP) principles, improving code modularity, maintainability, and reducing cross-module dependency conflicts during integration.
- Designed and managed 8 JPA entities with Hibernate, implementing paginated queries and structured repository layers to support real-time inventory retrieval at scale.
- Automated manual spreadsheet-based inventory workflows including stock validation, approval flows, and expiry tracking by integrating backend APIs with frontend modules.
- Collaborated with frontend developers to ensure seamless API integration and reliable end-to-end functionality.

PROJECTS

Card Ease UI Website (Frontend) —Tech Stack: HTML, CSS, JavaScript — [Link](#)

Jul 2022 – Nov 2022

- Built a frontend web application using HTML, CSS, and JavaScript for card-based transaction simulation.
- Added client-side form validation in JavaScript for user inputs like username, password, account number, and other key fields with clear error alerts.
- Developed session management features using JavaScript, including inactivity timeout, automatic logout, and secure page navigation.

Dry Eye Syndrome Classification (Machine Learning)—Tech Stack: Python, Scikit-learn, Pandas, NumPy —[Link](#)

Aug 2023 – Dec 2023

- Created a machine learning model using Support Vector Machine (SVM) to classify Dry Eye Syndrome severity using 2,307 patient records, achieving 93% accuracy.
- Executed data preprocessing and feature extraction techniques using Pandas and NumPy, including imputation, normalization, and severity-label encoding to ensure robust generalization on unseen data.
- Compared 4 ML models using performance metrics with Matplotlib, selected SVM as the best-performing model, and translated predictions into clinical recommendations for lifestyle changes and medical interventions.

Image Manipulation Detection (Deep Learning) —Tech Stack: TensorFlow, CNN, OpenCV— [Link](#)

Jan 2024 – Apr 2024

- Developed an image manipulation detection system to identify forged and spliced images using real-time analysis, processing 7,000+ images from the CASIA2 dataset.
- Implemented Error Level Analysis (ELA) and JPEG recompression techniques to highlight tampered regions.
- Trained a Convolutional Neural Network (CNN) model to accurately detect image forgery.
- Achieved 90% detection accuracy by analyzing compression artifacts, noise inconsistencies, and metadata.

SKILLS

Programming Languages	: Java, Python, SQL.
Frontend Technologies	: HTML, CSS, JavaScript.
Backend Development	: Java, Spring Boot, Spring MVC, REST APIs, JWT, Hibernate, JPA.
Machine Learning	: TensorFlow, scikit-learn, Pandas, NumPy, Matplotlib.
Tools & Platforms	: GitHub, VS Code, Jupyter Notebook, AWS, MySQL, IntelliJ.

EDUCATION

Integrated M.Tech - Computer Science (Core)

Sep 2021- May 2026

Vellore Institute of Technology, Vellore

CGPA: 8.11

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals – Microsoft — [Link](#)

Generative AI Productivity Skills with Microsoft and LinkedIn — [Link](#)
